Periodic Review Report Certification Statement

I, Cari Covell, certify that I am currently a NYS registered professional engineer and that this Periodic Review Report and all attachments were prepared under my direction. To the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the Site remedial program, and generally accepted engineering practices; and that the information presented is accurate and complete.

For each institutional or engineering control identified for the Site, I certify that all of the following statements are true:

1. the institutional control and/or engineering control employed at this Site is unchanged from the date the control was put in place, or last approved by DER.
2. nothing has occurred that would impair the ability of such control to protect public health and the environment.
3. nothing has occurred that would constitute a violation or failure to comply with any Site Management Plan for this control.
4. access to the Site will continue to be provided to DER to evaluate the remedy, including access to evaluate the continued maintenance of this control.

Cari Covell, P.E.

GEI Consultants, Inc.

New York State Professional Engineer

License Number 111377

It is a violation of Article 145 of New York State Education Law for any person to alter this document in any way without the express written verification of adoption by any New York State licensed engineer in accordance with Section 7209(2), Article 145, New York State Education Law.

1. Introduction

The Patchogue former manufactured gas plant (MGP) Site (the Site), located in Patchogue, New York (Figure 1), is currently in the New York State (NYS) Inactive Hazardous Waste Disposal Site (IHWDS) Program, Site No. 1-52-182, administered by New York State Department of Environmental Conservation (NYSDEC). As further described below, the Site was previously remediated under the NYS MGP Voluntary Cleanup Program administered by NYSDEC in accordance with Order on Consent Index # D1-001-99-05, Site # 152173, executed in September 1999.

The overall Site is comprised of two main areas referred to herein as the on-site area and the off-site area, as further described below. The on-site and off-site areas are depicted on Figure 2.

The Site was remediated via excavation and in-situ solidification (ISS) at various times in 2019. The ISS mass below the crushed stone surface cover within the central area of the Site is comprised of fill and impacted soil mixed with a low percentage of Portland cement. The ISS mass extends to varying depths from 7 feet to 23 feet bgs.

This Periodic Review Report (PRR) was prepared to document site management activities completed at the Site during this reporting period (May 9, 2025 through May 9, 2026). Site management activities were conducted in general accordance with the NYSDEC-approved Site Management Plan (SMP) (Brown and Caldwell Associates, February 2023).

Site management activities currently consist of the following:

- Semiannual groundwater monitoring and sampling.
- Annual site-wide inspection and monitoring of Institutional and Engineering Controls (ICs/ECs), including the Site cover system and Site fencing.
- Preparation of semiannual groundwater monitoring and sampling reports.
- Annual preparation of PRRs.

GEI Consultants Inc., DBA GEI Consultants Engineering, Geology, Architecture & Landscape Architecture (GEI) also completes non-aqueous phase liquid (NAPL) monitoring at all accessible wells during site visits and documents the findings for each reporting period. Sample locations and IC/EC boundaries are provided on Figures 3 and 4, respectively.

1.1. Background

The Site was operated as a MGP from 1904 to 1926. The Site was owned and operated by the Patchogue Gas Company independently from 1904 through 1926 and under ownership of the Long Island Lighting Company (LILCO) from 1927. The MGP was constructed by the Patchogue Gas Company in approximately 1904.

The earliest Sanborn Fire Insurance (Sanborn) Maps indicate that initial gas production activities included the coal gasification process, although the Browns Directory reports that the Lowe water gas process was used. A boiler, a component of the water gas process, is depicted on the Sanborn map.

A 60,000 cubic foot gas holder initially present on the Site is consistent with limited production of manufactured gas at the facility; larger manufactured gas production operations would likely have required additional and larger gas holders. A gas sphere present at the Site during later operations stored gas under high pressure and was consistent with the use of the Patchogue facility for distribution of gas produced elsewhere.

Routine production of manufactured gas ended in 1914 when the facility was modified to store and distribute high pressure gas produced at other facilities. From 1915 through 1917, Suffolk Gas & Electric purchased high-pressure gas stored at and distributed from the Site. From 1918, the gas supplier is identified only as LILCO. From 1922 through 1925, emergency gas production occurred at the Site.

Review of a 1926 Sanborn Map included in the Preliminary Site Assessment (PSA) Report (VHB, 2002) indicated a group of seven horizontal aboveground storage tanks (ASTs) were installed sometime after 1910. According to documentation from KeySpan (now National Grid), these ASTs were used for additional gas storage at the Site and are incorrectly labeled as oil tanks on the Sanborn Maps.

The distribution facility remained until the 1970s when LILCO sold the property to third parties. From the mid-1970s through early 2005, the Site was used as a refrigeration equipment and scrap storage yard. LILCO was acquired by Brooklyn Union Gas (BUG) in 1999 and the two merged to form KeySpan Corporation, who acquired the Site in 2005 for remediation purposes. National Grid acquired KeySpan in 2007 and currently maintains ownership of the Site.

On September 30, 1999, KeySpan Gas East Corporation entered into Order on Consent D1-001-99-05 with NYSDEC to conduct a PSA of the Former Patchogue MGP Site. The PSA was conducted in 2001, and the results were documented and submitted to NYSDEC in March 2002 in the PSA Report (VHB, 2002). In 2008 and 2009, remedial investigation (RI) activities were performed at the Site, and the results were documented and submitted to NYSDEC as the Remedial Investigation Report (RIR) (TetraTech EC, December 2009).

1.2. Site Location and Description

On-Site Area

The on-site area is located at 234 West Main Street in the Village of Patchogue, Town of Brookhaven, Suffolk County, New York and is identified as District 204 Section 12 Block 9 and Lot 6.4 on the Village of Patchogue Tax Map. The on-site area is approximately 3.6-acres with a maximum length (north-south) of approximately 680 feet and a maximum width (east-west) of 180 feet.

The on-site area is bounded to the north by West Main Street, beyond which is currently Blue Point Brewing Company and Patchogue Lake. To the east of the on-site area is an unpaved access driveway and two commercial properties, beyond which is an undeveloped property (owned by the Town of

Brookhaven) and the Patchogue River. South of the on-site area is a residential area and an overflow pond to the south/southwest. West of the on-site area is a steep slope, beyond which are a residential area and municipal storage yard. The on-site area has relatively flat topography with a typical elevation of approximately 5 feet above mean sea level (msl).

Off-Site Area

The off-site area is located at 212 West Main Street in the Village of Patchogue, Town of Brookhaven, Suffolk County, New York and is identified as District 204 Section 12 Block 9 and Lot 67.1 on the Village of Patchogue Tax Map. The off-site area is approximately 0.9-acres with a maximum length (north-south) of approximately 230 feet and a maximum width (east-west) of 260 feet.

The off-site area includes a two-story commercial/industrial building of approximately 12,000 square feet (sf). The remainder of the off-site area ground surface is paved except for a narrow soil walkway east of the building. Chain-link fencing (6 feet high) runs along the eastern and southern property line along the bank of the Patchogue River. There is a 4-foot-wide gate at the southern corner of the off-site area that allows access to the Patchogue River.

The off-site area is bordered to the north by West Main Street, beyond which is a property occupied by Blue Point Brewing Company and Patchogue Lake. East of the off-site area is an undeveloped property owned by the Town of Brookhaven, beyond which is the Patchogue River. South of the off-site area is a portion of the on-site area and the Patchogue River, and to the west by the on-site area beyond which are a residential area and municipal storage yard. The off-site area has relatively flat topography with a typical elevation of approximately 5 feet above msl.

1.3. Site Geology

The Site is generally flat with an elevation of approximately 5 feet above msl. A layer of crushed stone, varying from 2 to 4 feet thick, covers the central portion of the Site. Below the crushed stone surface, the existing fill varies in thickness but is typically up to 3 feet thick. Beneath the fill is a layer of alluvial deposits which are likely floodplain sediments associated with the Patchogue River. These deposits consist of layers of sands, silts, clays, and organic material, including peat deposits.

Much of the sand in the alluvial deposits is likely derived from the underlying sand unit and locally the alluvial deposits can be similar in character to this underlying unit. The alluvial deposits are generally thin and are locally discontinuous. Underlying the alluvial deposits is a unit of sand with varying amounts of gravel. This unit is likely glacial outwash deposited during the Pleistocene Epoch. The sand unit extends to a depth of at least 30 feet below ground surface (bgs), which was the depth of the deepest borings drilled during Site investigation activities.

The ISS mass below the crushed stone surface cover within the central portion of the Site is comprised of fill and impacted soil mixed with a low percentage of Portland cement. The ISS mass extends to varying depths from 7 feet to 23 feet bgs.

1.4. Summary of Investigation and Remedial History

The locations where MGP impacts were observed during the investigation activities are concentrated in the former locations of the MGP-related structures such as the gas holder, purifier house boiler, and tanks in the central area of the Site. These impacts were observed in the subsurface soils, predominantly at depths up to 10 feet bgs of soil. Locally, these impacts were present at depths up to nearly 23 feet bgs, although the intervals of deeper impact are thin and less frequent.

Groundwater sampling conducted during previous RIs and quarterly monitoring activities indicated that dissolved phase benzene, toluene, ethylbenzene and xylene (BTEX) and polycyclic aromatic hydrocarbon (PAH) compounds were present at concentrations above the Class GA groundwater quality criteria in the central portion of the Site. These elevated groundwater concentrations coincided with the locations where dense non-aqueous phase liquid (DNAPL) was previously encountered in the subsurface.

As indicated in the RIR, the RI investigation indicates surface soil, soil vapor, and surface water are not significant contaminant transport mechanisms. In addition, the RIR and the evaluation of the Patchogue River sediments discussed in the on-site conceptual model also supported that sediment is not a medium of concern at the Site.

Based on the findings of the Site investigations [i.e., the PSA, RI and pre-design investigation/supplemental pre-design investigation (PDI/SPDIs)], exposure assessments and the evaluation of the river sediments, the impacted media that were addressed in the focused feasibility study (FFS) included surface soils, subsurface soil, source material, and groundwater.

The surface soils included the areal extent of the portion of the Site subject to previous filling activities and the former MGP operations area (the central area of the Site) at depths up to 2 feet bgs. This layer included impacted areas presumably from the former MGP operations and other historical Site activities. The impacted subsurface soils included those soils in the two portions of the central portion of the Site. The depth of impacted soil ranged from ground surface to nearly 23 feet bgs. The impacted soil contained DNAPL and associated stains, sheens and odors, as well as concentrations of BTEX and PAH compounds above soil cleanup objectives (SCOs). MGP-related source material (source material) is considered to be the DNAPL identified during visual observations noted as part of the investigation activities and described in the boring logs as blebs, soils partially coated to saturated with DNAPL and DNAPL globs. MGP-impacted source material were the contaminants of concern and the source of soil and groundwater impacts. Petroleum impacts, noted through visual and olfactory observations during the investigation activities, were co-mingled with the MGP-related impacts.

The implemented remedy consisted of the components described below.

Excavations

- Any existing former MGP structures (i.e., piping), debris, and major obstructions (i.e., railroad), to allow for treatment of underlying soils and installation of a soil cover system.

- On-site fill materials to a depth of at least 2 feet bgs over the entire central portion of the on-site remedial area (beyond the limits of the ISS area) to allow for installation of a 2-foot thick surface cover system.
- Soil in an area of approximately 40 feet long by 20 feet wide located along the west-southwest portion of the on-site remedial area, to the depth of 4 feet bgs. The area was backfilled with certified clean stone and a 2-foot-thick stone cover was installed.
- The excavations were backfilled with certified imported clean stone that met the 6 NYCRR 375-6.7(d) restricted-residential criteria for backfill.

ISS of Soil

- MGP-related source material and existing soils were mixed in-place with Portland cement to form a solid mass with low hydraulic conductivity relative to surrounding soils to prevent migration of MGP-related contaminants and to encapsulate the impacts. The horizontal and vertical extents of the ISS area were determined utilizing the results of investigation activities ended to encapsulate the impacts.
- Following ISS treatment, the top four feet of the solidified material was excavated to accommodate the installation of the Site cover system. The excavated material was transported and disposed off-site at a licensed disposal facility.
- The area was backfilled with four feet of clean stone.

Site Cover System

A Site cover system was installed to allow for restricted residential use of the Site. The Site was restored generally to pre-existing grades. The Site cover system was installed in areas where the upper 2 feet of exposed surface soil exceed the applicable SCOs. The Site cover system consists of a minimum of 2 feet of crushed stone meeting the requirements for cover material set forth in 6 NYCRR Part 375-6.7(d). The Site cover system was placed over an orange-colored geotextile fabric that serves as a visible demarcation layer. The Site cover system in the off-site area also consists of a building and its foundation system, as well as asphalt pavement.

Remedial History Timeline

The following provides a remedial history timeline and a summary of available project records to document key investigative and remedial milestones for the Site.

- Preliminary Site Assessment Report Order on Consent D1-001-99-05, NYSDEC Site No. 1-52-182 Former Patchogue MGP Site, Village of Patchogue, Suffolk County, New York, VHB, March 2002.
- Final Remedial Investigation Report for the Patchogue Former MGP Site, Patchogue, Suffolk County, New York, prepared by TetraTech EC, Inc., December 2009.
- Pre-Design Investigation (PDI) and Supplemental Pre-Design Investigation (SPDI), as presented in Focused Feasibility Study, Patchogue Former Manufactured Gas Plant Site, NYSDEC Site

No. 1-52-182, Village of Patchogue, Suffolk County, New York (FFS), prepared by Brown and Caldwell Associates, May 2011.

- The Limited Field Investigation conducted on January 6, 2012, as presented in Utility Corridor Work Plan (Revision 3), Patchogue Former MGP Site, Patchogue, Suffolk County, New York, Site No. 1-52-182, prepared by Brown and Caldwell Associates, February 2012.
- Remedial Design Report, 50-75% Submission, NYSDEC Site No. 1-52-182, Village of Patchogue, Suffolk County, New York, prepared by Brown and Caldwell Associates, December 2012.
- The off-site area investigation, as presented in the letter reports dated June 18, 2014 and April 25, 2016.
- Remedial Design Report, 95% Submission, Patchogue Former MGP Site, NYSDEC Site No. 1-52-182, Village of Patchogue, Suffolk County, New York, prepared by Brown and Caldwell Associates, April 2018.
- Remedial Design Report, 100% Submission, Patchogue Former MGP Site, NYSDEC Site No. 1-52-182, Village of Patchogue, Suffolk County, New York, prepared by Brown and Caldwell Associates, May 2019.
- Implementation of the primary portions of the remedy between June 2019 and December 2019 (winter shutdown).
- Completion of site restoration activities between June 2020 and November 2020.
- Final Engineering Report, Patchogue Former MGP Site, NYSDEC Site No. 1-52-182, Village of Patchogue, Suffolk County, New York, Brown and Caldwell Associates, January 2023.
- Site Management Plan, Patchogue Former MGP Site, NYSDEC Site No. 1-52-182, Village of Patchogue, Suffolk County, New York, Brown and Caldwell Associates, August 2023.
- NYSDEC approval of the Final Engineering Report (FER) and SMP via letter dated January 8, 2024.

Routine groundwater monitoring activities have been ongoing to assess natural attenuation of MGP residuals at the Site since implementation of the Site remedy. Groundwater monitoring activities and frequency, as determined by the NYSDEC, will continue at the Site until residual groundwater concentrations are found to be consistently below ambient water quality standards (AWQS), the Site Standards, Criteria and Guidelines (SCGs), or have become asymptotic at an acceptable level over an extended period.

1.5. Remaining Impacts

This section provides a summary of the remaining MGP-related impacts in soil and groundwater following implantation of the Site remedy.

As described in the January 2023 FER, limited PAH compounds slightly to marginally exceed the Restricted Residential Use SCO at post-remediation soil borings located throughout the on-site and off-site areas; however, no exceedances of total BTEX were observed.

Isolated constituent concentrations were detected above Class GA groundwater quality criteria at monitoring well locations located near the ISS mass during post-remediation sampling events.

1.6. Remedial Goals and Site Closure Criteria

Remedial activities completed at the Site were conducted in accordance with the NYSDEC-approved May 2019 Remedial Design Report, 100% Submission. Generally, remedial processes will be considered complete when monitoring indicates that the remedy has achieved the remedial action objectives identified by the decision document. The framework for determining when remedial processes are complete is provided in Section 6.4 of NYSDEC DER-10.

Since remaining MGP-related impacted soil and groundwater exist at the Site, ICs/ECs are required to protect human health and the environment. In addition to the monitoring well network, ECs at the Site consist of the Site cover system and Site fencing.

As described in the February 2023 SMP, the Site cover system and Site fencing are permanent controls and the quality and integrity of this system will be inspected at defined, regular intervals in accordance with the February 2023 SMP in perpetuity.

As described in the February 2023 SMP, long-term groundwater monitoring and sampling will be completed at the Site to assess natural attenuation on a quarterly basis for the first 2 years following implementation of the remedy, then on a semiannual basis for years three through five, as follows:

- Quarterly sampling of 18 wells for the first 2 years.
- Semiannual sampling of the shallow wells, except for wells MW-12D and MW-13D (a total of 12 wells), will be performed from year three through year five.
- After year five, monitoring frequencies will be reevaluated based on analytical data on a per-well basis.

It should also be noted that the NYSDEC approved elimination of the deeper groundwater monitoring wells (MW-4D, MW-7D, MW-8D, MW-10D, MW-11D, and MW-14D) from the groundwater monitoring and sampling program in an email correspondence with National Grid and Brown and Caldwell Associates dated April 13, 2022.

Such groundwater monitoring and sampling will continue, as determined by the NYSDEC in consultation with the New York State Department of Health (NYSDOH), until residual groundwater concentrations are found to be consistently below AWQS, the Site SCGs, or have become asymptotic at an acceptable level over an extended period. In the event that monitoring data indicates that monitoring for natural attenuation may no longer be required, a proposal to discontinue the system can be submitted to NYSDEC and monitoring will continue until permission to discontinue is granted in writing by the NYSDEC.

1.7. Current Remedy Status

No modifications were made to the remedy during this reporting period. The remedy remains effective at protecting the public health and the environment.

2. Remedy Evaluation

2.1. Site Cover System

The cover system at the Site is comprised of several different on-site and off-site components, as described below. Figure 4 presents the boundaries of the Site cover system.

- Exposure to remaining on-site MGP-related impacts is prevented by a stone cover system, comprised of a minimum of 2 feet of clean backfill.
- Exposure to the remaining off-site MGP-related impacts is minimized by the presence of the building and its foundation system, as well as an asphalt pavement cover system.

As described in the February 2023 SMP, the Site cover system is a permanent control and the quality and integrity of this system will be inspected at defined, regular intervals in accordance with the February 2023 SMP in perpetuity.

2.2. Site Fencing

Access to the Site is restricted by fencing with lockable gates installed along the perimeter of the on-site and off-site areas. The Site fence is 6 feet in height. Figure 4 presents the location of the Site fencing.

As described in the February 2023 SMP, the Site fencing is a permanent control and the quality and integrity of the fencing will be inspected at defined, regular intervals in accordance with the February 2023 SMP in perpetuity.

2.3. Monitoring Well Network

The monitoring well network is comprised of 18 monitoring wells located throughout the Site. In general, the wells range in depth from approximately 10 to 28 feet bgs. For discussion purposes, monitoring wells installed to depths less than 20 ft bgs are referred to as “shallow,” while monitoring wells installed to depths of deeper than 20 ft bgs are referred to as “deep.” In addition, two staff gauges (SG-1 and SG-2) are located within the Patchogue River to gauge water levels within the river, as depicted on Figure 3. Additional details on the groundwater monitoring well network are included in Section 3.2.3.

Groundwater monitoring is conducted to monitor groundwater quality and the long-term effectiveness of the remedy and ECs at the Site. Per the SMP, groundwater monitoring was to be performed quarterly following the remedy for 2 years (2020 and 2021), followed by semiannual sampling for a minimum of 3 years (2022 through 2024).

3. Institutional Control/Engineering Control Plan Compliance

Since remaining MGP impacts exist at the Site, IC/ECs are required to protect human health and the environment. The February 2023 SMP includes provisions to protect human health and the environment and manage remaining MGP impacts at the Site. The intent of this section is to provide a description of the IC/ECs, the objective and status of each IC/EC, and to describe the mechanisms used to monitor and enforce each IC/EC.

3.1. Institutional Controls

A series of ICs were described in the February 2023 SMP to: (1) implement, maintain and monitor the ECs; (2) prevent future exposure to remaining MGP-related impacts; and (3) limit the use and development of the Site to restricted residential uses only. Adherence to these ICs is required by the Deed Restriction and are implemented under the February 2023 SMP. The ICs for the Site are:

- Compliance with the Deed Restriction by the property owner/manager and the owner/manager's successors and assigns with all elements of the February 2023 SMP.
- All ECs must be operated and maintained as specified in the February 2023 SMP.
- All ECs on the Controlled Property must be inspected and certified at a frequency and in a manner defined in the February 2023 SMP.
- Groundwater, soil vapor, and other environmental or public health monitoring must be performed as defined in the February 2023 SMP.
- Data and information pertinent to Site Management for the Controlled Property must be reported at the frequency and in a manner defined in the February 2023 SMP.
- On-site environmental monitoring devices, including but not limited to, groundwater monitoring wells and soil vapor probes, must be protected and replaced as necessary to ensure the devices function in the manner specified in the February 2023 SMP.

ICs may not be discontinued without an amendment to or extinguishment of the Deed Restriction.

The Site has a series of ICs in the form of Site restrictions. Adherence to these Site restrictions is required by the Deed Restriction. The Site restrictions for the on-site and off-site areas are:

On-Site Area

- Submission of a periodic certification of ICs/ECs to NYSDEC.
- Restriction of the use of the Site to restricted residential, commercial, and/or industrial use.
- Maintenance of ECs by National Grid.

- Inspection of the ECs at a frequency and in a manner defined in the February 2023 SMP.
- Restriction on the use of groundwater underlying the property without necessary water quality treatment as determined by the NYSDOH or the Suffolk County Department of Health Services (SCDHS).
- Groundwater monitoring must be performed as defined in the February 2023 SMP.
- Data and information pertinent to Site management must be reported at the frequency and in a manner as defined the February 2023 SMP.
- Future intrusive activities that will disturb remaining MGP-related impacted material must be conducted in accordance with the Excavation Work Plan (EWP).
- Monitoring to assess the performance and effectiveness of the remedy must be performed, as defined in the February 2023 SMP.
- Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical component of the remedy shall be performed, as defined the February 2023 SMP.
- Access to the Site must be provided to agents, employees, or other representatives of the State of New York.
- The potential for vapor intrusion must be evaluated for any buildings developed on the Site within the IC boundaries and any potential impacts that are identified must be monitored or mitigated.
- Vegetable gardens and farming on the Site are prohibited.
- Must comply with the NYSDEC-approved February 2023 SMP.
- Must comply with the NYSDEC-approved Health and Safety Plan (HASP) and Community Air Monitoring Plan (CAMP) included in the February 2023 SMP.

Off-Site Area

- Submission of a periodic certification of the ICs/ECs.
- Restriction of the use of the off-site property for restricted residential, commercial, and/or industrial use.
- Maintenance of the ECs by the Owner through notification to National Grid.
- Inspection of the ECs by National Grid at a frequency and in a manner defined in the February 2023 SMP.
- Restriction on the use of groundwater underlying the off-site property without prior approval of the NYSDEC.
- Monitoring of groundwater, as defined in the February 2023 SMP.
- Data and information pertinent to management of the off-site property must be reported at the frequency and in a manner as defined the February 2023 SMP.

- Notification by the Owner of the off-site property to National Grid prior to future intrusive activities that may disturb remaining MGP-related impacted material. The intrusive activities must be conducted in accordance with the EWP (included in the February 2023 SMP).
- Conduct monitoring to assess the performance and effectiveness of the remedy, as defined in the February 2023 SMP.
- Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical component of the remedy will be performed as defined in the February 2023 SMP.
- Access to the Site must be provided to National Grid as well as agents, employees, or other representatives of the State of New York to assess compliance with the February 2023 SMP.
- The potential for vapor intrusion must be evaluated for any buildings developed on the off-site property in the area within the IC boundaries and any potential impacts that are identified must be monitored or mitigated.

The Site owner or remedial party (RP) will submit to NYSDEC a written statement that certifies, under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP. NYSDEC retains the right to access such Controlled Property at any time in order to evaluate the continued maintenance of any and all controls. This certification shall be submitted annually, or an alternate period of time that NYSDEC may allow and will be made by an expert that NYSDEC finds acceptable.

3.2. Engineering Controls

3.2.1. Site Cover System

The cover system at the Site is comprised of several different on-site and off-site components, as described below. Figure 4 presents the boundaries of the Site cover system.

- Exposure to remaining on-site MGP-related impacts is prevented by a stone cover system, comprised of a minimum of two feet of clean backfill.
- Exposure to the remaining off-site MGP-related impacts is minimized by the presence of the building and its foundation system, as well as an asphalt pavement cover system.

As described in the February 2023 SMP, the Site cover system is a permanent control and the quality and integrity of this system will be inspected at defined, regular intervals in accordance with the February 2023 SMP in perpetuity.

Based on the annual Site inspection completed on April 14, 2026, the Site cover system was noted to be in-place and effective with minimal to no signs of disturbance noted throughout this reporting period. As such, the Site cover system continues to be effective at preventing exposure to remaining MGP-related impacts at the Site.

3.2.2. Site Fencing

Access to the Site is restricted by fencing with lockable gates installed along the perimeter of the Site. The fence is 6 feet in height. Figure 4 presents the location of the Site fencing.

As described in the February 2023 SMP, the Site fencing is a permanent control and the quality and integrity of the fencing will be inspected at defined, regular intervals in accordance with the February 2023 SMP in perpetuity.

Based on the annual Site inspection completed on April 14, 2026, the Site fencing was noted to be in-place and effective with minimal to no signs of damage throughout this reporting period. As such, the Site fencing continues to be effective at preventing unauthorized access to the Site.

3.2.3. Monitoring Well Network

The monitoring well network is comprised of 18 monitoring wells located throughout the Site. In general, the wells range in depth from approximately 10 to 28 ft bgs. For discussion purposes, monitoring wells installed to depths less than 20 ft bgs are referred to as “shallow,” while monitoring wells installed to depths of deeper than 20 ft bgs are referred to as “deep.”

The monitoring wells were constructed of 2-inch diameter polyvinyl chloride (PVC) casing with screen intervals varying between 5 and 10-foot sections of 0.02-inch slotted PVC well screen. Bottom sumps were not installed in the monitoring wells. Monitoring well locations are depicted on Figure 3.

Details for the monitoring well network are tabulated below. In addition, two staff gauges (SG-1 and SG-2) are located within the Patchogue River to gauge water levels within the river, as depicted on Figure 3.

Based on the annual Site inspection completed on April 14, 2026, and groundwater monitoring and sampling completed during this reporting period, the monitoring wells were noted to be in-place and effective with minimal to no signs of damage throughout this reporting period.

3.3. IC/EC Plan Evaluation

The following Plans are applicable at the Site, as outlined in the February 2023 SMP:

3.3.1. Excavation Work Plan

The Site has been fully remediated for restricted residential, commercial, and/or industrial use. Any future intrusive work that will penetrate, encounter or disturb the remaining MGP-related impacts, and any modifications or repairs to the existing Site cover system will be performed in compliance with the EWP that is included in the February 2023 SMP. Intrusive construction work must also be conducted in accordance with the procedures defined in the HASP and the CAMP prepared for the Site.

The site-specific HASP is included in the February 2023 SMP that is in current compliance with DER-10, and 29 Code of Federal Regulations (CFR) 1910, 29 CFR 1926, and all other applicable Federal, State and local regulations. The site-specific CAMP is also included in the February 2023 SMP. Based on future changes to State and Federal health and safety requirements, and specific methods employed by future contractors, the HASP and CAMP will be updated and re-submitted with the notification provided in the EWP. Any intrusive construction work will be performed in compliance with the EWP, HASP, and CAMP, and will be included in the periodic inspection and certification reports submitted under the Site Management Reporting Plan.

The responsible remedial parties, and parties performing this work, are completely responsible for the safe performance of all invasive work, the structural integrity of excavations, and for structures that may be affected by excavations (such as building foundations and bridge footings). The Site owner will ensure that Site development activities will not interfere with, or otherwise impair or compromise, the ECs described in the February 2023 SMP.

As described above, no signs of excavation or disturbance were noted with respect to the Site cover system throughout this reporting period.

3.3.2. Soil Vapor Intrusion Evaluation

No construction of enclosed structures at the Site was completed or planned to be completed during this reporting period. As such, a soil vapor intrusion (SVI) evaluation was not required during this reporting period.

3.3.3. Contingency Plan

The February 2023 SMP includes a Contingency Plan to respond to emergencies, including injury to personnel, fire or explosion, environmental release, or serious weather conditions. In the event of any emergency, the procedures detailed in the Contingency Plan will be followed.

No emergencies occurred during this reporting period that required implementation or modification of the Contingency Plan.

3.3.4. Corrective Measures Plan

If any component of the remedy is found to be compromised outside of routine maintenance (e.g., monitoring well pad or well cover repairs, etc.), or if periodic certification cannot be provided due to an issue with an IC/EC, a Corrective Measures Plan will be submitted to the NYSDEC for approval. This plan will explain the component remedy and provide details and a schedule for performing the corrective measures work. Unless an emergency condition exists, no work will be performed pursuant to the Corrective Measures Plan unless approved by NYSDEC.

As no component of the remedy was found to be compromised during this reporting period, a Corrective Measures Plan was not required.

3.4. Notifications

On-Site Area

Notifications will be submitted by the property owner (currently National Grid) to the NYSDEC and National Grid (by subsequent property owners), as needed, in accordance with NYSDEC's DER-10 and the February 2023 SMP for the following reasons:

- 60-day advance notice of any proposed changes in Site use that are required under the terms of the Order on Consent, 6NYCRR Part 375 and/or Environmental Conservation Law.
- 30-day advance notice of any field activity pursuant to the EWP included in the February 2023 SMP.
- 45-day advance notice of any proposed ground-intrusive activity pursuant to the EWP.
- Notice will be provided to NYSDEC within 48 hours of any damage or defect to the foundation, structures or EC that reduces or has the potential to reduce the effectiveness of an EC, and likewise, any action to be taken to mitigate the damage or defect.
- Notice will be provided to NYSDEC by verbal notice by noon of the following day of any emergency, such as a fire, flood or earthquake that reduces or has the potential to reduce the effectiveness of ECs in place at the Site, with written confirmation within 7 days that includes a summary of actions taken, or to be taken, and the potential impact to the environment and the public.
- Follow-up status reports on actions taken to respond to any emergency event requiring ongoing responsive action submitted to the NYSDEC within 45 days describing and documenting actions taken to restore the effectiveness of the ECs.

Any proposed change in the ownership of the Site, use of the Site, or the responsibility for implementing this SMP will include the following notifications:

- At least 60 days prior to the change, the NYSDEC and National Grid (in the case of subsequent property owners) will be notified in writing of the proposed change. This will include a certification that the prospective purchaser/RP (also known as the Respondent) has been provided with a copy of the Order on Consent, the Record of Decision (ROD), and all approved work plans and reports, including the February 2023 SMP.
- Within 15 days after the transfer of all or part of the Site, the new owner's name, contact representative, and contact information will be confirmed in writing to NYSDEC and National Grid.

Contact information for the above notifications is included in the February 2023 SMP.

Off-Site Area

Notifications will be submitted by the off-site property owner to National Grid and the NYSDEC, as needed, for the following reasons:

- 60-day advance notice of any proposed changes in the use of the off-site property.
- 45-day advance notice of any proposed ground-intrusive activity to be conducted on the off-site property pursuant to the EWP.
- Within 48 hours of any damage or defect to the foundation, structures or EC on the off-site property, that reduces or has the potential to reduce the effectiveness of an EC, and likewise, any action to be taken to mitigate the damage or defect.
- Verbal notice by noon of the following day of any emergency, such as a fire, flood or earthquake that reduces or has the potential to reduce the effectiveness of ECs in place at the off-site property, with written confirmation within 7 days that includes a summary of actions taken, or to be taken, and the potential impact to the environment and the public.
- Submit follow-up status reports on actions taken to respond to any emergency event on the off-site property requiring ongoing responsive action submitted within 45 days describing and documenting actions taken to restore the effectiveness of the ECs on the off-site property.

Any proposed change in the ownership of the off-site property, use of the off-site property, or the responsibility for implementing the February 2023 SMP will include the following notifications.

- At least 60 days prior to the change, NYSDEC and National Grid will be notified in writing of the proposed change. This will include a certification that the prospective purchaser has been provided with a copy of the February 2023 SMP.
- Within 15 days after the transfer of all or part of the off-site property, the new owner's name, contact representative, and contact information will be confirmed in writing.

Contact information for the above notifications is included in the February 2023 SMP.

4. Monitoring Plan Compliance

4.1. Site Inspection

Per the requirements of the February 2023 SMP, an annual Site inspection is required to compile sufficient information to assess the following:

- Compliance with ICs, including usage of the on-site and the off-site properties.
- An evaluation of the condition and continued effectiveness of ECs located in the on-site and the off-site areas.
- General conditions of the on-site and the off-site areas at the time of the inspection.
- The management activities being conducted in the on-site and the off-site areas including, where appropriate, confirmation sampling and a health and safety inspection.
- Confirm that on-site and the off-site area records are up to date.

GEI completed the annual Site inspection, which included visual observation of the Site cover system and Site fencing on April 14, 2026. The Site inspection forms completed during this reporting period are provided in Appendix A.

The Site cover system was noted to be in-place and effective with minimal to no signs of disturbance noted throughout this reporting period. The Site fencing was noted to be in-place and effective with minimal to no signs of damage throughout this reporting period.

As such, all IC/ECs appear to remain in-place and effective, as specified in the February 2023 SMP, during this reporting period.

4.2. Groundwater Monitoring

Per the requirements of the February 2023 SMP, groundwater monitoring is conducted to monitor groundwater quality and the long-term effectiveness of the remedy and ECs at the Site. Groundwater monitoring was to be performed quarterly following the remedy for 2 years (2020 and 2021), followed by semi-annual sampling for a minimum of 3 years (2022 through 2024).

The intent of the groundwater monitoring program is to assess natural attenuation following the implementation of the remedy until residual groundwater concentrations are found to be consistently below AWQS, the Site SCGs, or have become asymptotic to an acceptable level over an extended period. The results are also used to evaluate the potential for impacts to water quality in the Patchogue River from potential discharge of Site-related constituents in shallow Site groundwater.

The monitoring well network is comprised of 18 monitoring wells located throughout the Site. In general, the wells range in depth from approximately 10 to 28 ft bgs. For discussion purposes, monitoring wells installed to depths of less than 20 ft bgs are referred to as “shallow,” while monitoring wells installed to

depths of deeper than 20 ft bgs are referred to as “deep.” In addition, two staff gauges (SG-1 and SG-2) are located within the Patchogue River to gauge water levels within the river. Monitoring well and staff gauge locations are depicted on Figure 3.

It should also be noted that the NYSDEC approved elimination of the deeper groundwater monitoring wells (MW-4D, MW-7D, MW-8D, MW-10D, MW-11D, and MW-14D) from the groundwater monitoring and sampling program in an email correspondence with National Grid and Brown and Caldwell Associates dated April 13, 2022.

4.2.1. Groundwater Monitoring and Sampling Scope

During each semiannual groundwater monitoring event depth-to-groundwater (DTW) measurements and NAPL gauging readings are collected at all 18 monitoring wells. In addition, staff gauge readings are collected from the two staff gauges (SG-1 and SG-2) located within the Patchogue River during the semiannual groundwater monitoring events. Water level measurements and NAPL gauging are conducted using an electronic oil/water interface probe to the nearest 0.01 foot.

Per NYSDEC approval, groundwater samples are routinely collected from the following 12 monitoring wells on a semiannual frequency.

Location ID	Aquifer Zone	Approximate Total Depth of Well (ft bgs)
On-Site Monitoring Wells		
MW-1	Shallow	15
MW-4S	Shallow	12
MW-7S	Shallow	12
MW-10S	Shallow	15
MW-14S	Shallow	12
Off-Site Monitoring Wells		
MW-3	Shallow	10
MW-8S	Shallow	10
MW-11S	Shallow	14
MW-12S	Shallow	14
MW-12D	Deep	24
MW-13S	Shallow	13
MW-13D	Deep	24

Groundwater sampling was conducted using low-flow purging and sampling techniques in accordance with the United States Environmental Protection Agency (USEPA) protocol (USEPA, July 1996, Revised September 2017). Samples were submitted to Eurofins Edison Laboratories Environmental (Eurofins), a NYSDOH Environmental Laboratory Approval Program (ELAP) certified laboratory.

Groundwater samples are analyzed for BTEX compounds using USEPA SW-846 Method 8260, and PAHs using USEPA SW-846 Method 8270. The selective ion monitoring (SIM) component of the 8270 analysis is performed for certain PAH compounds to obtain lower detection limits. Groundwater samples are also monitored in the field for pH, specific conductivity, temperature, turbidity, oxidation-reduction potential, and dissolved oxygen.

In addition, quality assurance/quality control (QA/QC) samples are collected during each semiannual monitoring event, including trip blanks (one per cooler containing samples for BTEX analysis), a field duplicate, matrix spike/matrix spike duplicate (MS/MSD), and an equipment blank.

Purge water is containerized in properly labeled 55-gallon steel drums and is transported for off-site treatment/disposal as non-hazardous waste in accordance with applicable rules and regulations.

Groundwater monitoring and sampling summary reports are submitted to the NYSDEC on a semiannual frequency, and PRRs for each annual reporting period are submitted to the NYSDEC on an annual frequency.

Groundwater monitoring and sampling field logs generated during this reporting period as provided are Appendix B.

4.2.2. Data Validation

Groundwater analytical data packages are validated and data usability summary reports (DUSRs) for each monitoring event are prepared by GEI. Overall, the analytical data for the groundwater monitoring were generally determined to be usable for the intended purposes with the following exceptions, with one exception: for the second semiannual 2025 sample round, VOC analysis for samples MW-4S, MW-13D, and DUP-01 were analyzed one day out of the hold time of 7 days, and were therefore rejected during validation.

Laboratory analytical reports generated during this reporting period are provided as Appendix C. DUSRs generated during this reporting period are provided as Appendix D.

4.2.3. Groundwater Monitoring and Sampling Findings

Groundwater and NAPL Measurements

Depth to groundwater, calculated groundwater elevations, and NAPL thickness measurements collected from all 18 monitoring wells and two staff gauges during this reporting period are provided in Table 1.

The water table is relatively shallow throughout the Site and is typically located in the fill that overlies the native alluvial and outwash deposits overlying the ISS mass. Depth to groundwater measurements ranged from approximately 0.6 to 5.9 ft bgs during this reporting period. Based on our shallow water table contour map for this reporting period (Figures 5 and 6), groundwater flow is generally to the southeast at the Site, towards the Patchogue River, consistent with historical flows.

Staff gauge level measurements within the Patchogue River were not able to be collected during this reporting period, as follows: the staff gauges could not be located during the first semiannual 2025 sampling event and the staff gauges could not be accessed during the second semiannual 2025 sampling event.

NAPL was not observed in any monitoring wells during this reporting period.

Groundwater Sample Analytical Data

BTEX and PAHs

Per NYSDEC approval, semiannual groundwater samples were collected from the 12 monitoring wells referenced above during this reporting period.

Laboratory analytical results for BTEX and PAHs are provided in Table 2. Analytical results are compared to the NYS Division of Water Technical and Operational Guidance Series (TOGS) Class GA AWQS.

A comparison of analytical results for this reporting period to historical data is provided in Tables 3 and 4, for BTEX and PAHs, respectively.

Consistent with recent and historical post-remedy groundwater monitoring events, BTEX was either non-detect or was detected at concentrations well below the AWQS. Exceedances of the AWQS were limited to PAHs during this reporting period. Several PAHs were identified in slight to moderate exceedance of the AWQS in four of 12 wells (6 of 23 total samples) as follows:

- Acenaphthene was detected at concentrations exceeding its AWQS of 20 ug/L in wells MW-3 (22 ug/L) and MW-11S (26 ug/L).
- Benzo[a]anthracene, at concentrations ranging from 0.089 ug/L to 0.18 ug/L, was detected in exceedance of its AWQS of 0.002 ug/L in 4 wells (six total samples), with the greatest concentration detected in well MW-3, located in the southwestern portion of the off-site area adjacent to the Patchogue River.
- Benzo[b]fluoranthene, at a concentration of 0.84 ug/L, was detected in exceedance of its AWQS of 0.002 ug/L in well MW-1, located in the northwestern-most portion of the on-site area.
- Benzo[k]fluoranthene, at a concentration of 0.035 ug/L, was detected in exceedance of its AWQS of 0.002 ug/L in well MW-1, located in the northwestern-most portion of the on-site area.
- Chrysene, at concentrations ranging from 0.062 ug/L to 0.12 ug/L, was detected in exceedance of its AWQS of 0.002 ug/L in four wells (five total samples), with the greatest concentration detected in wells MW-1 and MW-3. These wells are located in the northwestern-most portion of the on-site area and the southwestern portion of the off-site area adjacent to the Patchogue River, respectively.
- Indeno[1,2,3-cd]pyrene, at a concentration of 0.037 ug/L, was detected in exceedance of its AWQS of 0.002 ug/L in well MW-1, located in the northwestern-most portion of the on-site area.

- Naphthalene, at concentrations of 27 ug/L and 28 ug/L, was detected in exceedance of its AWQS of 10 ug/L during both sample events in well MW-3, located in the southwestern portion of the off-site area adjacent to the Patchogue River.

Consistent with recent and historical data, the greatest occurrence and concentrations of PAHs were detected in monitoring wells MW-1 and MW-3 (namely MW-3) during this reporting period with acenaphthene and naphthalene exceeding the AWQS by the largest margin, also similar to recent and historical data. These detections of acenaphthene and naphthalene are likely due to the disturbance caused by implementation of the ISS component of the remedy in 2020 when concentrations of these constituents were observed to have generally increased. However, detections of these constituents have continued to decrease since post-remediation monitoring was initiated in March 2020 (Appendix E).

Exceedances of the AWQS for other potentially site-related impacts may be related to the disturbance of fine or colloid-sized particles during purging or sampling activities, as these constituents have generally low aqueous solubilities, are not readily mobile in groundwater, and are unlikely to have migrated from the ISS mass.

pH

Following implementation of the remedy in 2020, pH levels in wells MW-3 and MW-13S were noted to be elevated above the Class GA criteria range of 6.5 to 8.5 standard units (SU). As such and given that these wells are located immediately upgradient of the Patchogue River, pH levels in these wells are reviewed on a semiannual frequency.

pH levels in MW-3 ranged from 8.87 to 10.04 SU and pH levels in well MW-13S were within the Class GA range during this reporting period (Appendix E).

Evaluation of Groundwater Impacts to Surface Water Quality

As described above, groundwater flows from the northwest to the south and southeast across the Site toward the Patchogue River. Given their location immediately upgradient of the river, monitoring wells MW-3S, MW-4S, and MW-12S are evaluated to determine potential impacts from the Site to surface water within the river.

The portion of the Patchogue River abutting the Site is classified as a Class C water body per 6 NYCRR Part 897. The Class C surface water quality criteria listed in the NYS AWQS and Guidance Values (Class C criteria) were used for the evaluation below.

BTEX and PAHs

BTEX concentrations in wells MW-3S, MW-4S, and MW-12S were either non-detect or below the Class C criteria, similar to recent historical data, and therefore do not have the potential to impact surface water quality in the Patchogue River. It is noted that the BTEX analysis for MW-4S and MW-13D were rejected due to the analysis being conducted one day out of hold time for the second semi-annual 2025 sample round. The BTEX results for MW-4D have been non-detect since the December 2021 sampling event and no BTEX detections have ever been observed in MW-13D during the historical monitoring period.

One or more of several PAHs (acenaphthene, benzo(a)anthracene, fluorene, naphthalene, phenanthrene, and pyrene) were detected slightly to moderately above the Class C criteria in wells MW-3 and MW-4S during this reporting period. Although it is not anticipated that these constituent concentrations would impact surface water quality if discharged to the river, as some of these compounds have low aqueous solubilities and thus low potential for migration, a mass flux analysis was conducted in 2020 to assess this potential. The evaluation was conducted by estimating the rate at which a mass of Site-related constituents dissolved in groundwater may be contributing to the surface water in the Patchogue River (i.e., the mass flux of constituents from groundwater to surface water). Based on the analysis, it was determined that the estimated concentrations of acenaphthene, benzo(a)anthracene, benzo(a)pyrene, fluorene, naphthalene, phenanthrene, and pyrene in river water resulting from the discharge of groundwater from the Site were below applicable surface water quality criteria. The details of these constituent mass flux analyses are presented Appendix F.

The concentrations of acenaphthene, benzo(a)anthracene, benzo(a)pyrene, fluorene, naphthalene, phenanthrene, and pyrene during this reporting period were similar to (within the same order of magnitude) or less than those detected during the 2020 mass flux analysis (see groundwater quality trend plots for select constituents presented in Appendix E). Since the estimated concentrations of these constituents in surface water, as derived from the previous mass flux analyses, were below applicable surface water criteria, based on the 2020 mass flux analyses, additional investigation of these constituents in the river is determined to not be necessary. Based on the evaluation conducted, Site-related constituents in shallow groundwater do not impact surface water quality in the Patchogue River.

pH

Following implementation of the remedy in 2020, pH levels in well MW-3, located in the southwestern portion of the off-site area adjacent to the Patchogue River and downgradient of the ISS mass, have been observed up to levels as high as 11.31 SU, well above the Class GA criteria range of 6.5 to 8.5 SU. pH levels in MW-3 have been generally decreasing since the December 2023 monitoring event and ranged from 8.87 to 10.04 SU during this reporting period. Pre-remedy pH concentrations in well MW-3 were typically ± 6.9 SU.

Additionally, post-remedy pH levels in well MW-13S also increased to a high of 9.88 SU in April 2021; however, pH in this well has generally trended downward since that time and was within the Class GA range during this reporting period (Appendix E).

Although increased pH levels in groundwater are not anticipated to impact surface water quality in the Patchogue River, a mass flux analysis was conducted in 2020 to evaluate the potential for these increased pH levels to affect surface water quality in the river. The details of these constituent mass flux analyses are presented Appendix G. Since the pH levels measured in MW-3 and MW-13S are currently lower than the levels measured in 2020 and the estimated pH level in surface water was below applicable surface water criteria, pH levels in shallow groundwater are not impacting surface water quality in the Patchogue River and no additional evaluation is necessary at this time.

5. Conclusions and Recommendations

As described in the February 2023 SMP, the ECs in-place at the Site currently include the Site cover system, Site fencing, and the monitoring well network. Per the requirements of the February 2023 SMP, an annual Site inspection is completed at the Site to assess the Site ICs/ECs and groundwater monitoring is conducted semiannually to assess natural attenuation of Site-related impacts and the long-term effectiveness of the remedy at the Site.

The Site cover system was noted to be in-place and effective with minimal to no signs of disturbance noted throughout this reporting period and the Site fencing was noted to be in-place and effective with minimal to no signs of damage throughout this reporting period. As such, all IC/ECs appear to remain in-place and effective, as specified in the February 2023 SMP, during this reporting period. The NYSDEC IC/EC certification form is included as Appendix H.

The following is a summary of conclusions associated with the groundwater monitoring and sampling completed during this reporting period.

- NAPL was not identified in any monitoring well.
- Consistent with recent and historical post-remedy groundwater monitoring events, BTEX was either non-detect or was detected at concentrations well below the AWQS.
- Several PAHs were identified in slight to moderate exceedance of the AWQS in four (MW-1, MW-3, MW-11S, and MW-13S) of 12 wells. Consistent with recent and historical data, the greatest occurrence and concentrations of PAH exceedances were detected in monitoring wells MW-1 and MW-3 (namely MW-3) during this reporting period with acenaphthene and naphthalene exceeding the AWQS by the largest margin, also similar to recent and historical data.

These detections of acenaphthene and naphthalene are likely due to the disturbance caused by implementation of the ISS component of the remedy in 2020 when concentrations of these constituents were observed to have generally increased. However, detections of these constituents have continued to decrease since post-remediation monitoring was initiated in March 2020. This reduction is anticipated to continue over time and will be evaluated during subsequent monitoring events.

- The concentrations of Site-related constituents detected in groundwater at the Site are not impacting surface water quality in the Patchogue River based on an evaluation of the mass flux analysis described above.

In addition, increased pH levels in groundwater immediately downgradient of the ISS mass are considered a potential effect from implementation of ISS in the area. pH levels have decreased since the initiation of post-remediation monitoring and are anticipated to further decrease to pre-remedy levels over time. The increased pH levels measured in groundwater at the Site are not impacting surface water quality in the Patchogue River based on evaluation of the mass flux analysis described above.

Based on the above findings and conclusions, GEI recommends that annual inspection of the Site ICs/ECs continue. However, based on the stable to decreasing nature of the Site-related impacts routinely detected in groundwater since the remedy, GEI recommends that the sampling frequency be reduced to annual, and the groundwater monitoring and sampling results be reported solely in the annual PRR. As per the SMP, the sampling frequency was to be reevaluated following five years of post-remedy sampling which concluded in 2024.

NOTES:
Bold font indicates a detection, but no exceedance.
Exceeds NYSDEC AWQS Standard or Guidance Value.
Exceeds NYSDEC Class C Criteria.
Exceeds NYSDEC Class C Criteria
ug/L= Micrograms per liter.
*= NYSDEC Class C Criteria is compared to Wells MW-3, MW-4S, and MW-12S only, given their downgradient proximity to Patchogue River.
D= Result is from an analysis that required a dilution
J= Analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U= Analyte not detected at or above the level indicated
NE= Not established.

Appendix A Environmental Easement and Engineering Control Inspection Form

ENVIRONMENTAL EASEMENT AND ENGINEERING CONTROL INSPECTION FORM
Patchogue Former Manufactured Gas Plant

A. General Information:

Inspector: Craig Hayes Inspection Date: 4/14/26 Last Inspection Date: _____
Title: Field manager Affiliation (employer): GEI Consultants
Street Address: 1000 NY Ave. Suite B City: Huntington Station
State: NY Zip Code: 11746 Telephone: _____ Email: chayes@geiconsultants.com

B. Site Location:

Site Street Address: 210,234 West Main Street Municipality: Patchogue
County: Suffolk State: NY Block(s): 10 Lot(s): 234-6.4 210-67.1

C. Institutional Controls:

1. Is the current land use consistent with Environmental Easement? Yes X No _____ If no, explain below.

2. Do the institutional and engineering controls continue as designed and intended to protect the public health and safety and the environment? Yes X No _____ If no, explain below.

3. Was each alteration or disturbance (e.g., penetration) of the engineering control, if any, performed expediently and appropriately to maintain the integrity of the engineering control? Yes _____ No _____ If no, explain below.

Not applicable

4. Do any new standards, regulations, or laws apply to the site that might necessitate the implementation of additional procedures, apart from those specified in the Environmental Easement, to evaluate the protectiveness of the engineering control? Yes _____ No X If yes, explain below.

ENVIRONMENTAL EASEMENT AND ENGINEERING CONTROL INSPECTION FORM

Patchogue Former Manufactured Gas Plant

D. Engineering Control Conditions (Use extra sheet provided, if needed):

1(a) Engineering Control Type: Cover system, fence, monitoring wells

(b) Condition of the Engineering Control surface (describe any cracks, disturbances, etc.):

Overall, the site cover is in good condition with some minor

cracks in the asphalt noted. Stone cover is in good condition.

A gap in the perimeter fence was noted that was subsequently fixed.

Monitoring well network in good condition.

(c) Describe maintenance activities performed, if any, during reporting period:

Not applicable

(d) Are repairs needed? Yes X No _____ If yes, describe type, location, and size of repair area. (Mark locations on attached site map. Attach pre-and post- repair photographs on the "Photograph Log". Use additional sheets if necessary.)
Repairs made. See attached photos.

2 (a) Engineering Control Type: _____

(b) Condition of the Engineering Control surface (describe any cracks, disturbances, etc.):

(c) Describe maintenance activities, if any, performed during reporting period:

(d) Are repairs needed? Yes _____ No _____ If yes, describe type, location, and size of repair area. (Mark locations on attached site map. Attach pre-and post- repair photographs on the “Photographic Log”. (Use additional sheets if necessary.)

I, hereby, certify that the engineering controls were inspected and maintained and its integrity remains so that the remedial action continues to be protective of the public health and safety and of the environment.

Inspector's Name (print or Type): Craig Hayes Title: Field manager

Inspector's Signature: Craig Hayter Date: 4/15/26

Appendix B Groundwater Sample Field Forms

Monitoring Well Sample Data Form

Project: National Grid - Bay Shore Patchogue Well ID: MW-1 Sample Date: 07/28/25

Total Well Depth (from top of casing): 14.93' Total Well Depth (From Well Log): Depth to Water (from top of casing): 5.90'

Well Diameter: 3/4" 1" 2" 4" Pump Intake Depth (Mid-Point of Screen Zone): 12.5'

Sampling Crew: Greg Vouzianas Purge Time: Start: 0920 Finish: 0950

Purging Method: Peristaltic Pump Sample Time: Start: 0955 Finish:

Sampling Method: Low Flow

Sample Analysis: BTEX/PAH+2-Methylnaphthalene

ANALYTICAL REPORT

PREPARED FOR

Attn: Christopher Morris
GEI Consultants Inc
1000 New York Avenue
Huntington Station NY 11746

Generated 08/04/2025

JOB DESCRIPTION

National Grid-Downstate Patchogue

JOB NUMBER

460-331763-1

Eurofins Edison

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Authorization

Job Narrative
460-331763-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 7/30/2025 7:10 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.2°C.

GC/MS VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job ID: 460-331763-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Indicates an estimated value.
U	Analyzed for but not detected.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Indicates an estimated value.
U	Analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Method GC6MSD-1: Column: Vocol (60m X 0.25mm ID X 1.5µm film thickness). Temp. 1 = 35°C (10min.), Temp. 2 = 200°C (8.75 min.), Rate = 4°C/min., Injector Temp. = 200°C, Detector Temp. = 220°C. Analysis performed by Candice Warren.

TIC: [8583]70373.D

- The certified value is the concentration calculated from gravimetric and volumetric measurements unless otherwise stated.
- Standards are prepared gravimetrically using balances that are calibrated with weights traceable to NIST (see above).
- Standards are certified (+/-) 0.5% of the stated value, unless otherwise stated.
- All Standards, after opening ampule, should be stored with caps tight and under appropriate laboratory conditions.
- Uncertainty Reference: Taylor, B.N. and Kuyat, C.E., "Guidelines for Evaluating and Expressing the Uncertainty of NIST Measurement Result," NIST Technical Note 1297, U.S. Government Printing Office, Washington, DC, (1994).

- The certified value is the concentration calculated from gravimetric and volumetric measurements unless otherwise stated.
- Standards are prepared gravimetrically using balances that are calibrated with weights traceable to NIST (see above).
- Standards are certified (+/-) 0.5% of the stated value, unless otherwise stated.
- All Standards, after opening ampule, should be stored with caps tight and under appropriate laboratory conditions.
- Uncertainty Reference: Taylor, B.N., and Kuyat, C.E., "Guidelines for Evaluating and Expressing the Uncertainty of NIST Measurement Results," NIST Technical Note 1297, U.S. Government Printing Office, Washington, DC, (1994).

* Restek is unable to identify a reliable and/or acceptable second source for this material - the same batch of neat material may have been used to produce both the primary and secondary standard. The primary and secondary standards were prepared using different equipment and personnel.

Specific Reference Material Notes:

N-nitrosodiphenylamine 1000 ug/mL equivalent when used for GC analysis. Actual formulation is diphenylamine 855 ug/mL.

N-Nitrosodiphenylamine is prone to breakdown in the injection port and will be converted to diphenylamine.

N-Nitrosodiphenylamine is also a reactive species that can initiate premature decomposition of other compounds in the mix. For these reasons diphenylamine is used in the preparation of this mixture. When comparing the response of this compound to mixtures manufactured using N-nitrosodiphenylamine, a difference in response will be observed.

Column:
30m x 0.25mm x 0.25µm
Rtx-5 (cat.#10223)

Carrier Gas:
hydrogen-constant flow 1.8 mL/min.

Temp. Program:
80°C (hold 0.1 min.) to 330°C
@ 9.6°C/min. (hold 2.86 min.)

Inj. Temp:
250°C

Det. Temp:
340°C

Det. Type:
FID

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Justin Albertson - Operations Tech-ARM QC

Date Passed: 13-Oct-2017

Manufactured under Restek's ISO 9001:2008
Registered Quality System
Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 569730.SEC **Lot No.:** A020147867
Description : 8270 List 1 / Std #9
8270 List 1 / Std #9 2000 µg/mL, Methylene chloride, 5mL/ampul
Container Size : 10 mL **Pkg Amt:** > 5 mL
Expiration Date : September 30, 2025 **Storage:** 10°C or colder
Handling: Contains carcinogen/reproductive toxin.

Manufactured under Restek's ISO 9001:2015
Registered Quality System
Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Reference Material Certificate
Product Information Sheet

Product Name: 1,4-Dioxane Standard

Lot Number: 00067424517

Product Number: NV-152-1

Lot Issue Date: 12-Feb-2024

Storage Conditions: Store at Room Temperature (15° to 30°C).

Expiration Date: 31-Mar-2028

Component Name	Concentration	Uncertainty	CAS#	Analyte Lot
1,4-dioxane	2006 ±	10 µg/mL	000123-91-1	RM20283

Matrix: methanol (methyl alcohol)

Description:

This document is prepared in accordance with ISO 17034 and Guide 31. This analytical reference material (RM) standard was manufactured and verified in accordance with an ISO 9001 registered quality system and analyte concentrations were verified by an ISO 17025 accredited laboratory. The concentration and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed above. Purity values are taken from approved vendor raw material certificates.

Traceability:

The balances used for these measurements are calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z540.3, ISO 9001, ISO 17025, and ISO 17034. Calibrated Class A glassware is used for volumetric measurements. Thermometers are calibrated against a NIST traceable thermometer in accordance with NIST Special Publication 1088.

Homogeneity:

This analytical reference (RM) standard was unitized according to an in-house procedure and is guaranteed to be homogeneous. There is no minimum sub-sample size required.

Instructions for Use:

Sample aliquots for analysis should be withdrawn at 20°C to 25°C immediately after opening the container and should be processed without delay for the certified values to be valid within the stated uncertainties.

Safety:

Refer to the Safety Data Sheet on www.agilent.com for information regarding this analytical reference material.

Intended Use:

This analytical reference (RM) standard is intended for the preparation of working reference samples for use in routine laboratory analyses, calibration of instruments, validation of analytical methods, assessments of measurement methods, and continuing calibration verification.

Expiration of Certification:

The certification of this analytical reference standard (RM) is valid until the expiration date specified above, provided the material is handled and stored in accordance with the instructions given in this certificate. This certification is nullified if the material is damaged, contaminated, or otherwise modified.

Maintenance of Certification:

If substantive changes are noted that affect the certification before the expiration of this certificate, Agilent will notify the purchaser.

Product Number: CH-151-1

Lot Issue Date: 27-May-2022

Storage Conditions: Store at Room Temperature (15° to 30°C).

Expiration Date: 30-Jun-2026

Component Name	CERTIFIED VALUES		CAS#	Analyte Lot
	Concentration	Expanded Uncertainty		
hexachlorobenzene	100.2	± 0.5 µg/mL	000118-74-1	RM03125

Matrix: methanol (methyl alcohol)

Description:

This document is prepared in accordance with ISO 17034 and Guide 31. This analytical reference material standard was manufactured and verified in accordance with an ISO 9001 registered quality system and analyte concentrations were verified by an ISO 17025 accredited laboratory. The concentration and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed above.

Traceability:

The balances used for these measurements are calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z540.3, ISO 9001, ISO 17025, and ISO 17034. Calibrated Class A glassware is used for volumetric measurements. Thermometers are calibrated against a NIST traceable thermometer in accordance with NIST Special Publication 1088.

Homogeneity:

This analytical reference standard was unitized according to an in-house procedure and is guaranteed to be homogeneous. There is no minimum sub-sample size required.

Instructions for Use:

Sample aliquots for analysis should be withdrawn at 20°C to 25°C immediately after opening the container and should be processed without delay for the certified values to be valid within the stated uncertainties.

Safety:

Refer to the Safety Data Sheet on www.agilent.com for information regarding this analytical reference material.

Intended Use:

This analytical reference standard is intended for the preparation of working reference samples for use in routine laboratory analyses, calibration of instruments, validation of analytical methods, assessments of measurement methods, and continuing calibration verification.

Expiration of Certification:

The certification of this analytical reference standard is valid until the expiration date specified above, provided the material is handled and stored in accordance with the instructions given in this certificate. This certification is nullified if the material is damaged, contaminated, or otherwise modified.

Product Name: N-Nitrosodimethylamine Standard
Product Number: NS-100-1
Storage Conditions: Store at Room Temperature (15° to 30°C).

Lot Number: 0006733950
Lot Issue Date: 09-Mar-2023
Expiration Date: 30-Apr-2027

Component Name	Concentration	Uncertainty	CAS#	Analyte Lot
N-nitrosodimethylamine	100.3 ±	0.5 µg/mL	000062-75-9	RM20316

Matrix: methanol (methyl alcohol)

Description:

This document is prepared in accordance with ISO 17034 and Guide 31. This analytical reference material (RM) standard was manufactured and verified in accordance with an ISO 9001 registered quality system and analyte concentrations were verified by an ISO 17025 accredited laboratory. The concentration and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed above. Purity values are taken from approved vendor raw material certificates.

Traceability:

The balances used for these measurements are calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z540.3, ISO 9001, ISO 17025, and ISO 17034. Calibrated Class A glassware is used for volumetric measurements. Thermometers are calibrated against a NIST traceable thermometer in accordance with NIST Special Publication 1088.

Homogeneity:

This analytical reference (RM) standard was unitized according to an in-house procedure and is guaranteed to be homogeneous. There is no minimum sub-sample size required.

Instructions for Use:

Sample aliquots for analysis should be withdrawn at 20°C to 25°C immediately after opening the container and should be processed without delay for the certified values to be valid within the stated uncertainties.

Safety:

Refer to the Safety Data Sheet on www.agilent.com for information regarding this analytical reference material.

Intended Use:

This analytical reference (RM) standard is intended for the preparation of working reference samples for use in routine laboratory analyses, calibration of instruments, validation of analytical methods, assessments of measurement methods, and continuing calibration verification.

Expiration of Certification:

The certification of this analytical reference standard (RM) is valid until the expiration date specified above, provided the material is handled and stored in accordance with the instructions given in this certificate. This certification is nullified if the material is damaged, contaminated, or otherwise modified.

Purity values are taken from approved vendor raw material certificates.

Traceability:

The balances used for these measurements are calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z540.3, ISO 9001, ISO 17025, and ISO 17034. Calibrated Class A glassware is used for volumetric measurements. Thermometers are calibrated against a NIST traceable thermometer in accordance with NIST Special Publication 1088.

Homogeneity:

This analytical reference (RM) standard was unitized according to an in-house procedure and is guaranteed to be homogeneous. There is no minimum sub-sample size required.

Instructions for Use:

Sample aliquots for analysis should be withdrawn at 20°C to 25°C immediately after opening the container and should be processed without delay for the certified values to be valid within the stated uncertainties.

Safety:

Refer to the Safety Data Sheet on www.agilent.com for information regarding this analytical reference material.

Intended Use:

This analytical reference (RM) standard is intended for the preparation of working reference samples for use in routine laboratory analyses, calibration of instruments, validation of analytical methods, assessments of measurement methods, and continuing calibration verification.

Expiration of Certification:

The certification of this analytical reference standard (RM) is valid until the expiration date specified above, provided the material is handled and stored in accordance with the instructions given in this certificate. This certification is nullified if the material is damaged, contaminated, or otherwise modified.

This Certified Reference Material was verified in accordance with ISO/IEC 17025 (AT-1339) and ISO 17034 (AR-1463)

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

¹ Certified Analyte Concentration = Purity x Prepared Concentration.

The Uncertainty associated with the certified concentration reported on this certificate is $\pm 2.4\%$ and was determined in accordance with ISO 17034. This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

² All weights are traceable through NIST, Test No. 684/291344-18 & 684/292805-19

³ Purity/Identity determined by one or more of the following methods: GC/MS, LC/MS, NMR, FTIR, Melting Point.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Hazard Information: Please refer to the SDS for information regarding the hazards associated with using this material.

This product was prepared according to in-house procedures and is guaranteed to be homogeneous.

Certified By:

Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

1. Quality Standards:

ISO 17034:2016 – General Requirements for the Competence of Reference Material Producers

ISO/IEC 17025:2017 – General Requirements for the Competence of Testing And Calibration Laboratories

ISO 9001:2015 – Quality Management System – Requirements
Eagle Registrations

- 2. Intended Use:** The product covered by this certificate is designed for calibration or for use in quality control procedures for the specified chemical compounds listed on the reverse side. This product can be used for quantification and/or identification. This product can also be used as a reference material to validate analytical procedures, subject to the conditions under Section 7.
- 3. Manufacturing:** All balances are calibrated daily using an in-house procedure with weights that are compared annually to master weights and traceable to NIST. The balances are also calibrated annually by an ISO/IEC 17025 accredited calibration laboratory. Please refer to the NIST test number listed on the front of this certificate. Class A glassware is used in the manufacture and quality control of all standards. Good Laboratory Practices have been used throughout the preparation of this Standard.
- 4. Homogeneity:** This product is sufficiently homogeneous and any sample size would be within the uncertainty budget.
- 5. Stability:** The manufacturer guarantees the stability of this solution through the expiration date stated on the label, when handled and stored according to the conditions stated on the label
- 6. Uncertainty:** The uncertainty values as stated on the face of this certificate have been determined using the EURACHEM/CITAC Guide. We report a combined expanded uncertainty equal to the positive square root of the total variance of the uncertainty of the components using the following formula: $u_a = \sqrt{(u(V))^2 + (u(m))^2 + (u(IV))^2 + (u(RO))^2}$ This formula represents uncertainty components from the mass, volume, short-term stability, long-term stability and homogeneity factors associated with the production of this product. The expanded uncertainty, assumes a normal distribution and a coverage factor of $k=2$ is chosen using approximately a 95% confidence level.
- 7. Legal Notice and Limit of Liability:** This product is for routine laboratory analysis and research purposes only. The company's liability will be limited to replacement of product or refund of purchase price. Notice of claims must be made within thirty (30) days from date of delivery.

Product Name: Bis(2-chloroethyl) Ether Standard
Product Number: EPA-1081-1
Storage Conditions: Store at Room Temperature (15° to 30°C).

Lot Number: 0006736401
Lot Issue Date: 22-Mar-2023
Expiration Date: 30-Apr-2027

Component Name	Concentration	Uncertainty	CAS#	Analyte Lot
bis(2-chloroethyl) ether	5017 ±	25 µg/mL	000111-44-4	RM15508

Matrix: methanol (methyl alcohol)

Description:

This document is prepared in accordance with ISO 17034 and Guide 31. This analytical reference material (RM) standard was manufactured and verified in accordance with an ISO 9001 registered quality system and analyte concentrations were verified by an ISO 17025 accredited laboratory. The concentration and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed above. Purity values are taken from approved vendor raw material certificates.

Traceability:

The balances used for these measurements are calibrated with weights traceable to NIST in compliance with ANSI/NCCL Z540.3, ISO 9001, ISO 17025, and ISO 17034. Calibrated Class A glassware is used for volumetric measurements. Thermometers are calibrated against a NIST traceable thermometer in accordance with NIST Special Publication 1088.

Homogeneity:

This analytical reference (RM) standard was unitized according to an in-house procedure and is guaranteed to be homogeneous. There is no minimum sub-sample size required.

Instructions for Use:

Sample aliquots for analysis should be withdrawn at 20°C to 25°C immediately after opening the container and should be processed without delay for the certified values to be valid within the stated uncertainties.

Safety:

Refer to the Safety Data Sheet on www.agilent.com for information regarding this analytical reference material.

Intended Use:

This analytical reference (RM) standard is intended for the preparation of working reference samples for use in routine laboratory analyses, calibration of instruments, validation of analytical methods, assessments of measurement methods, and continuing calibration verification.

Expiration of Certification:

The certification of this analytical reference standard (RM) is valid until the expiration date specified above, provided the material is handled and stored in accordance with the instructions given in this certificate. This certification is nullified if the material is damaged, contaminated, or otherwise modified.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k \sqrt{u_{gravimetric}^2 + u_{homogeneity}^2 + u_{storage\ stability}^2 + u_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Manufactured under Restek's ISO 9001:2015
Registered Quality System
Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k \sqrt{u_{gravimetric}^2 + u_{homogeneity}^2 + u_{storage\ stability}^2 + u_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Solvent: Methylene chloride
CAS # 75-09-2
Purity 99%

Specific Reference Material Notes:

N-nitrosodiphenylamine 1000 ug/mL equivalent when used for GC analysis. Actual formulation is diphenylamine 855 ug/mL.

N-Nitrosodiphenylamine is prone to breakdown in the injection port and will be converted to diphenylamine.

N-Nitrosodiphenylamine is also a reactive species that can initiate premature decomposition of other compounds in the mix. For these reasons diphenylamine is used in the preparation of this mixture. When comparing the response of this compound to mixtures manufactured using N-nitrosodiphenylamine, a difference in response will be observed.

This lot was approved even though the %D for 4,6-DN-2-MP was greater than 10%.

Tech Tips:

N-Nitrosodiphenylamine (86-30-6) is prone to breakdown in the injection port and will be converted to Diphenylamine (122-39-4).

When comparing the response of Diphenylamine to mixtures manufactured using N-Nitrosodiphenylamine, a difference in response will be observed. The ratio of the MW can be used to calculate the theoretical concentration of the

N-Nitrosodiphenylamine.

Solvent: Methylene chloride CAS # 75-09-2 Purity 99%								

* Restek is unable to identify a reliable and/or acceptable second source for this material - the same batch of neat material may have been used to produce both the primary and secondary standard. The primary and secondary standards were prepared using different equipment and personnel.

Specific Reference Material Notes:

N-nitrosodiphenylamine 1000 ug/mL equivalent when used for GC analysis. Actual formulation is diphenylamine 855 ug/mL.

N-Nitrosodiphenylamine is prone to breakdown in the injection port and will be converted to diphenylamine.

N-Nitrosodiphenylamine is also a reactive species that can initiate premature decomposition of other compounds in the mix. For these reasons diphenylamine is used in the preparation of this mixture. When comparing the response of this compound to mixtures manufactured using N-nitrosodiphenylamine, a difference in response will be observed.

Column:
30m x 0.25mm x 0.25µm
Rtx-5 (cat.#10223)

Carrier Gas:
hydrogen-constant flow 1.8 mL/min.

Temp. Program:
80°C (hold 0.1 min.) to 330°C
@ 9.6°C/min. (hold 2.86 min.)

Inj. Temp:
250°C

Det. Temp:
340°C

Det. Type:
FID

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Date Mixed: 28-Sep-2017 **Balance:** 1128342313

Justin Albertson
Justin Albertson - Operations Tech-ARM QC

Date Passed: 13-Oct-2017

Manufactured under Restek's ISO 9001:2008
Registered Quality System
Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 31615 **Lot No.:** A0200028

Description : GC/MS Tuning Mixture
GC/MS Tuning Mixture 1,000µg/mL, Methylene Chloride, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : July 31, 2026 **Storage:** 10°C or colder

Handling: Contains carcinogen/reproductive toxin. **Ship:** Ambient

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Josh McCloskey - Operations Technician I

Date Mixed: 18-Jul-2023

Balance Serial # 1128360905

Christie Mills - Operations Lead Tech - ARM QC

Date Passed: 24-Jul-2023

Manufactured under Restek's ISO 9001:2015
Registered Quality System
Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k \sqrt{u_{gravimetric}^2 + u_{homogeneity}^2 + u_{storage\ stability}^2 + u_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

CERTIFIED VALUES

Elution Order	Compound	CAS #	Lot #	Purity	Grav. Conc. (weight/volume)	Expanded Uncertainty * (95% C.L.; K=2)
1	Vinyl acetate	108-05-4	RD240423RSR	99%	5,004.5 µg/mL	+/- 172.9671

* Expanded Uncertainty displayed in same units as Grav. Conc.

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Tech Tips:

Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods. Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.

- The certified value is the concentration calculated from gravimetric and volumetric measurements unless otherwise stated.
- Standards are prepared gravimetrically using balances that are calibrated with weights traceable to NIST (see above).
- Standards are certified (+/-) 0.5% of the stated value, unless otherwise stated.
- All Standards, after opening ampule, should be stored with caps tight and under appropriate laboratory conditions.
- Uncertainty Reference: Taylor, B.N. and Kuyat, C.E., "Guidelines for Evaluating and Expressing the Uncertainty of NIST Measurement Result," NIST Technical Note 1297, U.S. Government Printing Office, Washington, DC, (1994).

Expected RT: 3.35

A chromatogram plot with the x-axis labeled 'Min' (minutes) ranging from 3.0 to 3.7 and the y-axis labeled 'Y' ranging from 61 to 117. A single, sharp, prominent peak is visible at approximately 3.37 minutes, reaching a height of about 117. Above this peak, the text 'm/z 93.0' is displayed. The baseline is relatively flat with minor fluctuations.

Question	Answer	Comment
Radioactivity wasn't checked or is $\leq$ background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is $<6\text{mm}$ (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

JOB DESCRIPTION

National Grid Downstate Patchogue

JOB NUMBER

460-331678-1

Eurofins Edison

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

**Job Narrative
460-331678-1**

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 7/29/2025 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.7°C.

GC/MS VOA

Method 8260D: Four surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: MW-12S (460-331678-6[MSD]). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA

Method 8270E: The continuing calibration verification (CCV) associated with batch 460-1052909 recovered above the upper control limit for Indeno[1,2,3-cd]pyrene, Dibenzo(a,h)anthracene and Benzo[g,h,i]perylene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E: The laboratory control sample duplicate (LCSD) for preparation batch 460-1052770 and analytical batch 460-1052909 recovered outside control limits for the following analytes: 2-Methylnaphthalene. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_SIM: The laboratory control sample duplicate (LCSD) for batch preparation batch 460-1052770 and analytical batch 460-1053189 recovered outside control limits for the following analytes: Chrysene. The laboratory control sample (LCS) recovery was within control limits. The associated sample data has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	Surrogate is outside acceptance limits.
U	Analyzed for but not detected.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
*	MS or MSD is outside acceptance limits.
J	Indicates an estimated value.
U	Analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count
